

Miss Emma Brown
Area Coroner for Birmingham and Solihull
VIA EMAIL

18 March 2026

Dear Miss Brown

Re: Regulation 28 Report to Prevent Future Deaths – Ms Chloe Ulett

Firstly, we wish to express our sincere condolences to the family of Chloe.

As your report highlights, disorders of urea metabolism are rare and diagnostically challenging, however an early diagnosis is important.

In order to raise awareness, we will highlight this case in our tri-annual [Safety Bulletin](#). The Safety Bulletin is sent to all Fellows and Members of the Faculty of Intensive Care Medicine, and is a mechanism for promoting learning, with the aim of reducing risk. Through the Safety Bulletin, we will signpost open access resources for and will also highlight the utility of testing ammonia levels in encephalopathy of unknown cause.

In addition, we will draw attention to this being the [second Regulation 28 Report](#) in recent years which has stressed the need to test ammonia levels in patients who present in extremis with an unknown cause. That Regulation 28 Report was issued by the Senior Coroner of Milton Keynes in 2023 and concerned the death of Rohan Godhania.

If you have any further questions, please don't hesitate to contact the Faculty at
[REDACTED]

Kind regards
[REDACTED]
